

>From its inception, the Copyright Act protected the originators of educational, entertainment, political, and other such material while allowing for "fair use" of that material in all of the many ways that benefit the owners of this great country, its citizens. Some profit-making private corporations and their trade unions/associations seek to enhance their profits by selling the same material to the same people over and over again. The so-called FLAG is the latest attempt to limit and destroy the time honored principle of FAIR USE for the excess profit of private corporations over the welfare of the citizens of this country.

Please do NOT approve the concept of limiting your fellow citizens from the benefits of modern, digital technology.

Please do NOT approve the flag.
